

O BLUE MISSION BANOS 1st MISSION ARENA 14-16 November 2023 | Gothenburg, SE

Strengthening Marine Protected Area Networks, policy coherence and community involvement

THEME: Marine Pollution/MPAs/Ocean Regeneration

in 🕑 #MissionArenaBANOS1

Agenda

1st MISSION ARENA

14-16 November 2023, Gothenburg, Sweden

Workshop

Safeguarding Biodiversity: Strengthening Marine Protected Area Networks, policy coherence and community involvement.

Opening words: Jannica Haldin, HELCOM

Session 1- From protected to strictly protected areas

What is the status and what is needed to achieve the 10% of effective strict protection goal and the 30by30 target in the region?

- Johanna Fox, WWF Baltic
- Steven Degraer, RBINS
- Lena Tingström, SwAM

Session 2- Networks of MPAs and Blue Corridors

Are networks adequately planned and effectively implemented? Have relevant processes such as ecological connectivity been adequately considered in decision-making processes?

- Lena Tingström, SwAM
- Jannica Haldin, HELCOM
- Francisco Rafael Barboza Gonzalez, UTARTU

Session 3- Marine Protected Areas & Marine Spatial Planning integration

How much these processes go along and what is needed for an increased alignment? Can better policy coherence contribute to

- that? Kemal Pinarbasi, HELCOM
 - Jan Schmidtbauer Crona, SwAM
 - Froukje Maria Platjouw, NIVA

Session 4- Opportunities for MPA co-management: Community involvement and stewardship

Is co-management a solution for better and more effective management of MPAs? Is it contributing to effective conservation?

- Haidi Cecilie Petersen, SDU
- Johanna Fox, WWF Baltic
- Frederick Bruce, SUBMARINER

Where are we starting from? Key messages from the Baltic Sea status assessment

- importance of measures to strengthen Baltic Sea biodiversity
- we are the problem...
- but we are also the solution.

However, we are in a race against time!

How to win the race?

- through intense focus on addressing gaps
- through cooperation
- through strategic and transformative action
- through understanding our relationship with the ecosystem

£rossGo₩ in y #MissionArenaBANOS1

How to win the race?

- through intense focus on addressing gaps
- through cooperation
- through strategic and transformative action
- through understanding our relationship with the ecosystem

and EU Mission Ocean, and its associated projects, allow us to do that!

0

🕻 rossGoVII 🛛 in 🈏 #MissionAren

Today, we will be looking at:

- What is the status of protection and what is needed to achieve the 10% of effective strict protection goal and the 30by30 target in the region?
- Are networks adequately planned?
- Are networks effectively implemented?
- Have relevant processes such as ecological connectivity been adequately considered in decision-making processes?
- How synergistic are these processes and what is needed for an increased alignment? Can improved policy coherence contribute to that?
- Is co-management a solution for better and more effective management of MPAs? Is it contributing to effective conservation?

0

From protected to strictly protected areas

What is the status and what is needed to achieve the 10% of effective strict protection goal and the 30by30 target in the region?

THEME: Safeguarding biodiversity

in 🎔 #MissionArenaBANOS1

EU MPAs - quantity over quality?

- In 2019
 - 12,4% designated
 - Only 1,8 % with management plans
 - Less with effective management and monitoring
 - 59% of northern EU MPAs commercially trawled (Dureuil et al. 2018)

More quality with updated targets?

30 percent protection by 2030, including 10% strictly protected areas

£rossGo₩ in y #MissionArenaBANOS1

What are strictly protected areas

"Strictly protected areas are **fully and legally protected areas** designated to conserve and/or **restore the integrity of biodiversity-rich natural areas** with their underlying ecological structure and supporting natural environmental processes. **Natural processes are therefore left essentially undisturbed** from human pressures and threats to the area's overall ecological structure and functioning, independently of whether those pressures and threats are located inside or outside the strictly protected area".

EU definition of strictly protected areas

Positive attitude among key stakeholders

- WWF Poland MPA project
- Awareness raising among key stakeholders
- Recommendations
 - Transparent processes
 - Voices of local communities must be heard
 - Effectively managed MPAs bring benefits to local communities

Differing views on strict protection

- Placed in areas of least conflict?
- Which habitats, what species?
- Reference areas?
- Ban on fishing or allow some fishing?
- Need for a legal definition?
- Means for passive restoration?
- What about other pressures, e.g. eutrophication?
- Impacts on local communities?

EU Biodiversity Strategy

Biodiversity fares better in protected areas. However, the current network of legally protected areas, including those under strict protection, is not sufficiently large to safeguard biodiversity. Evidence shows that the targets defined under the Convention on Biological Diversity are insufficient to adequately protect and restore nature . Global efforts are needed and the EU itself needs to do more and better for nature and build a truly coherent Trans-European Nature Network.

EU Biodiversity Strategy

- The strategy has set the objective of establishing a truly coherent Trans-European Nature Network, to legally protect at least 30% of the land, including inland waters, and 30% of the sea in the EU, of which at least one third (10% of land and 10% of sea) to be under strict protection.
- In addition, in order to have a truly coherent and resilient Trans-European Nature Network, it will be important to set up ecological corridors to prevent genetic isolation, allow for species migration, and maintain and enhance healthy ecosystems.

Ecological coherence

- Adequacy
- Viability
- Representativity
- Replication
- Connectivity

Swedish framework for MPA network design and management

Representativity, connectivity and functionality

Session III: Marine Protected Areas and Marine Spatial Planning integration

Kemal Pinarbasi, HELCOM Secretariat

THEME!NFO WORKSHOP

in 🎔 #MissionArenaBANOS1

How to integrate MPAs and MSP?

" by including natural elements in the planning process."

How to integrate MPAs and MSP?

• Integration Approach: Integrate MSFD & MSP for streamlined coordination and include MPAs within MSP. Develop stronger political will for integration.

• Clear regulations

Clarify regulation for integration. Regulations can be a barrier for collaboration.

Awareness:

О

Increase **awareness** about MSP and biodiversity among authorities. Codesign MPAs with all interested departments in a given area from the start.

• Identify conflicts:

Highlight the **conflicts** that arise (particularly over resources) from a lack of coordination of uses.

eMSP – MSP4BIO workshop on EBA in MSP, Helsinki, May 2023

in 🕑 #MissionArenaBANOS1

The Crucial Role of Stakeholder Involvement

- Effective Marine Protected Areas (MPAs) is essential in conservation of marine ecosystems.
- MPAs can face challenges of resistance and lack of enforcement.
- Engagement with stakeholders and local communities can overcome some of the challenges.

Building a Foundation for Success

Communities engagement:

- Local knowledge
- Citizen-science
- Funding
- Buy-in / Ownership
- Reinforcement /Compliance

Co-creation as foundation for effective MPAs

- **Early engagement:** Include stakeholders as <u>early</u> as possible, i.e. in the idea and design phase.
- Inclusivity: Co-creation involves actively <u>engaging all</u> <u>relevant stakeholders</u>, including local communities, government agencies, scientists, NGOs, and businesses, in the decision-making process for MPA designation and management.
- **Collaborative Decision-Making:** It encourages collaborative and participatory decision-making, where stakeholders work together to define MPA goals, boundaries, and regulations.
- Shared Responsibility: Co-creation promotes a sense of shared responsibility and <u>ownership</u> among stakeholders, leading to a higher likelihood of compliance and successful MPA management.
- Adaptive Management: It recognizes the need for <u>flexibility</u> and adaptive management, allowing for adjustments based on ongoing feedback and changing environmental conditions.

Funded by

the European Union

The Benefits of Community engagement

- Increased effectiveness of MPAs.
- Long-term benefits of healthy marine ecosystems for future generations, impact local economies and social structures:
 - ripple effects on local communities, via tourism, leisure, fishing stocks, and cultural heritage etc.

Funded by

the European Unior

 Incorporate co-creation principles in guidelines for MPA processes.

Steps towards effective Mission Deployment in the ARENA region

Action Points for the ARENA region until 2030

3.1 TARGETS

• Ensure that 30% of the Baltic and North Sea are effectively protected with clearly defined conservation objectives and measures.

Achieve 10% of strict marine protection of the Baltic and North Sea by 2030.

3.2 ACTION POINTS

• Further develop and implement existing tools and solutions for efficient establishment and management of Marine Protected Areas (MPAs) and their networks.

• Enhance implementation of national measures such as marine (strict) protection for restoration and conservation of Baltic and North Sea.

 Establish better connected and functional transnational/regional MPA networks.
Implement and upscale tools and technologies, developed through ongoing projects (such as Protect Baltic, BLUE4ALL, MSP4BIO), to ensure effectiveness of the strictly protected areas in the Baltic and North Sea as part of marine protection and restoration initiatives.

3.2 ACTION POINTS

• Continue mainstreaming biodiversity protection into national / regional MSPs and other sectoral policies in line with findings of ongoing projects (such as MSP4BIO, CrossGov) and initiatives in cooperation with all stakeholders ensuring policy coherence.

• Devolve establishment, management, monitoring, and conservation of MPAs to local communities, empower local stakeholders for joint ownership of effective, conserved and

protected marine ecosystems and restoration efforts.

• Transfer and upscale good practices and technologies beyond the Arena region, such as those supporting the establishment of MPA networks and implementation of ecosystem based maritime spatial planning from Sweden and biodiversity inclusiveness in MSP from Denmark.
