

NORDIC SEAFARM

Current state of our products

- Seaweed species: Sugar kelp and Ulva on scale
(Dried, blanched, frozen, and salted)
- Food segment is our primary focus:
 - Sea Crackers (own brand)
 - Plant-based meats (collaboration with a food producer)
- Founded a joint venture during 2023 (Ocean Next) with a prominent food producer in Sweden.

Plans for the next year

- Continuing to develop products with our joint venture Ocean Next, plant-based blue food offerings
- Other key target segments:
 - Biomaterials
 - Fertilizers
 - Animal feed
- Pilot project to cultivate Dulse on a large scale (we have a test cultivation of 300 meters coming next season)

Challenges we are facing

- Seaweed still unknown to the public → need for education.
- Harvest more efficiently at a lower cost.
- Slow adoption of seaweed in the EU.

Thank you!

Nordic SeaFarm is involved in the following projects:
(Co-funded by the European Union)
